## FISHING GUIDE

CALENDAR WITH COMPLETE FISH ACTIVITY GRAPH

#### FISH MOVEMENT AND THE BIOLOGICAL CLOCK

The development of Forecaster has been based on two well-known principles:

- By analyzing past patterns, we can identify trends which will repeat themselves.
- The biological clock found in all living things is controlled by periodic, predictable phenomena.

Let's consider the factors which demonstrate these predictable patterns which we know to affect fish movement:

- Light variations
- Temperature and oxygen factors
- Tide force factors
- Other predictable patterns

#### CONDITIONS

Clear air, cool calm or soft breeze blowing, darkness, no clouds.

Light breaks, gradual from early light, or temperature at lowest point.

Phosphorescence becomes strongest, small waves on water surface, strong antitropical effects, some clouds forming, air and surface water temperature rising rapidly.

Big wave coming, low underwater visibility, lightning light showers, water choppy, light air temperatures, partly cloudy.

Wind blowing, water still wavy, strong winds, low clouds, heavy rain.

Heavy showers, brief waves are subsiding, sun breaking out, or temperature rapidly declining.

Soft breeze, calm or surface water temperature.

Heavy showers, brief waves are subsiding, sun breaking out, or temperature rapidly declining.

### A WORD ON COLD FRONTS

This is the most feared event before sunrise and it occurs as a normal periodic weather pattern.

The "cold front" period usually follows a storm which occurs on the east coast of the United States. The storm will usually be the last of the season for the area. The period of the storm is usually the most productive time for the fisherman. You may wish to wait for the low pressure to ease back and then to reach more hours of light for the fish. Some fish species are also sensitive to these changes.

### HOW TO USE THE FISH FORECASTER

Reading the curve for any given time on the time zone chart will determine the relative height of the curve at that time point. To make it easier to follow the curve, notice above the time line, the time to movement there will be. There is one curve for each day of the year and each curve covers a twenty-four hour period beginning at midnight on the left hand side of the graph and proceeding to the following midnight on the right side. Refer to the example following this section for a complete explanation of the use of the Fish Forecaster.

### MAKING TIME ADJUSTMENTS

The Forecaster curve is compared to a standard 24-hour clock. The standard clock is compared to a standard 24-hour clock. The standard clock is compared to a standard 24-hour clock. The standard clock is compared to a standard 24-hour clock.

Fishing Guide Information included on the inside cover spread of calendar.

Includes Daily Fishing Activity Forecast.

- Features:**
- Size: 10-7/8" w x 18" h open; 10-7/8" w x 10" h closed
  - Imprint Area: 10" w x 1-5/8" h
  - Stapled (standard)

- Quality, recycled gloss stock
- UV coated front cover
- Combinable subjects; minimum 75 per style
- Weight: 20 lbs. per 100 (bulk)
- Production Time: 10 business days after art and credit approval
